1 System overview

1.1 Components of the housing

The metal housing includes the following components:

1.2 Accessories Kit

The accessories kit includes the following cables. Install these cables as described in the chapter **Connection of the Devices**.

2 Mounting the housing

Open the housing cover lock with the provided key and open the cover. Mount the metal housing at the desired position with the screw anchors provided with the enclosure. Use the screws at the points to mount the housing against the wall.

Figure 2.1: Dimensions of the Housing
3 Connection of the Devices

Figure 3.1: Connections in the Enclosure
Connect the readers and other peripheral devices as described in the AMC Installation manuals and in the manuals of the peripheral devices. Route the device cables through the knockouts in the top and right side wall of the housing, or through the rear of the housing.

Notice!
Make sure that the mains adapter has the correct output voltage (12V or 24V).
When installing the enclosure, make sure to provide an appropriate disconnect device for the mains supply voltage. Removing a fuse or simply pulling the plug is not an appropriate means to disconnect the device!

**Warning!**
Risk of electric shock!
Disconnect the mains supply voltage before doing any work at the devices inside the enclosure.

**Notice!**
All cables connected to the AMC modules and the power supply are classified as Class 2 Conductors, with the exception of the battery cable and the AC input cable. These two are non-power limited circuits.

**Notice!**
For UL installations a minimum of ¼” (6.4 mm) spacing is to be maintained between all class 2 or 3 conductors and all electric, light, power, Class 1 conductors, non-Class 2 or 3 signaling conductors, or medium-power network-powered broadband communications-circuit conductors (see areas 3 and 4 in Fig. 3.1).

**Mounting Components**
1. Mount the AMC on the rail on the right (item 2 – Fig. 1.1) and left aside the power supply.
2. If rechargeable batteries are used, put them on the bottom of the housing and secure them using clip 7 (Fig. 1.1).

The components described below refer to **Cable A** (Figure 1.2):

**Cable A - AMC Power Cable**
1. Connect the 7-pin plug A1 to the AMC’s power supply connector (labeled: **POWER**).
2. Attach connectors **A3** to the PS-interface **DC** and **A2** to the interface labeled **OK**.

3. Connect the grounding cable **A4** at the grounding point **3** (Fig. 1.1).

The components described below refer to Figure 1.1:

**Cable 12 - AC Power Cable**
Connect the 2-pin plug **13** on the interface **AC** of the power supply.

**Cable 5 – Tamper Cable**
Connect the loose ends of the cover tamper switch to the 2-pin screw connector on the top of the AMC marked with **T**. Position the cable in the space between the housing and the mounting rail.

---

**Danger!**
Risk of electric shock
Make sure that all wires to be connected have Zero potential!

**Main AC supply X:**
1. Connect the grounding cable to the housing at position 8 in figure 1.1.
2. Connect the blue (neutral) wire to terminal **N**.
3. Connect the brown (phase) wire to terminal **L1**.

---

**Notice!**
Shorten the external supply wires so that the ground (yellow/green) wire is at least 20 mm (0.8 in.) longer than the live (blue and brown) wires. This ensures that the ground wire cannot be accidentally disconnected before live wires.

**Cable 1 – Cover grounding Cable**
1. Connect cable **1** to the grounding point on the cover.
2. Close the cover.
4 Connections for Supporting UPS

Notice!
Before switching to battery operation disconnect the AC Power Cable (Fig. 1.1 – item 13) from the power supply.

Notice!
Use only 12V 7Ah batteries.
Change lead batteries at least every 5 years

Notice!
In UL installations, if the fuse is blown, order cable No. F.01U. 328.004 with your regional spare part desk to replace the entire battery cable.

Cable G - Battery temperature sensor cable
1. Attach connector G1 on the PS-interface labeled RTH.
2. Route the cable across the temperature sensor bracket 6 so that the temperature sensor G2 hangs approximately 5 cm (2 in.) above the rechargeable batteries.
4.1 12 V Mode Operation

To set the power supply to 12V mode set the switch as displayed in the image below.

![Power Supply Switch in 12V Mode](image)

**Figure 4.1: Power Supply Switch in 12V Mode**

![12V Mode - with one battery (left) and two batteries (right)](image)

**Figure 4.2: 12V Mode - with one battery (left) and two batteries (right)**
The 12 V mode can be configured using one or two rechargeable batteries. For a one-battery installation, refer to the Figure 4.2 (left), and perform the following procedure:

1. Connect **B1** to the power supply position labeled **BAT**.
2. Connect **B2a** (black) to the rechargeable battery’s – terminal, and **B2b** (red) to the rechargeable battery’s + terminal.
3. Stick the bracket (Fig. 1.2 – item **J**) on the back of the housing next to the batteries.
4. Connectors **B3a** and **B3b** remain unused - fix them using the bracket **J**.

For the two-battery installation, refer to the Figure 4.2 (right) and perform the following procedure:

1. Connect **B1** to the power supply position labeled **BAT**.
2. Connect **B2a** (black) to the rechargeable battery’s – terminal, and **B2b** (red) to the rechargeable battery’s + terminal.
3. Connect **B3a** (black) to the second rechargeable battery’s – terminal, and **B3b** (red) to the second rechargeable battery’s + terminal.
4.2 24 V Mode Operation

To set the power supply to 24V mode set the switch as displayed in the image below.

Figure 4.3: Power Supply Switch in 24V Mode

Figure 4.4: 24V Mode
Cables B and C - Battery Cables
1. Connect the plug connector B1 on the PS-interface labeled with BAT.
2. Attach connector B2b (red) to the + pin of the first rechargeable battery.
3. With cable C connect the – pin of the first rechargeable battery to the + pin of the second rechargeable battery.
4. Attach connector B2a (black) to the – pin of the second rechargeable battery.
5. Stick the bracket (Fig. 1.2 – item J) on the back of the housing next to the batteries.
6. Connectors B3a and B3b remain unused – fix them using the bracket J.
