Software for access control and security management utilizing the innovative Access Modular Controller family

Cardholder administration of up to 10,000 cardholders

Graphical location map with device control via both map and device tree

Alarm management with details via alarm list and animated GIFs on interactive location maps

Video verification, video alarm verification, and video monitoring of live and recorded events

**System overview**

Access PE provides access control for small and medium-sized companies. Its installation is extremely simple and fast. There is no need to install and administer a database system. The system is easy to use and enables a person with minimal training to create badges and administer access rights. Specific event logging and reportings give you an easy overview of access rights and access data.

You can choose your readers and cards from the same bundle of devices, which are supported by Bosch’s medium to large scale BIS/ACE Access Engine systems, thereby safeguarding your investment for future extensions. Card personalization is included in Access PE, providing you with the means to design your badges, to perform image acquisition with USB-cameras and to use most commercially available Card Printers.

In addition to given standardized door models it is possible to use extended I/O functionality. The Access PE offers a map viewer, which provides a graphical representation of the premises with device control directly from the map. (e.g., doors opened or cameras activated) Alarm events are queued in a list and are easily located with the support of navigation maps and animated icons.

Through integrated video functionality and using the wide range of Bosch IP devices an operator can do, for example, a video verification by comparing live streams with the database image of the person requesting for access.

Access PE runs on a standard PC with a Windows operating system:

- Windows 2016 Standard Server (64 bit)
- Windows 2012 R2 Server
- Windows 10 x 64 Professional
- Windows 7

This can be a single workstation computer or a client-server system with a central server and remote workstations.

**Parts included**

- Access PE ISO image
- Access Professional Edition Software
- Card Personalization Software
- Documentation

The Access PE ISO Image Download is available in the Bosch Security Systems online product catalog.
### Access Control

The Access PE system, along with AMC access controllers, offers the following features:

- A wide range of pre-defined and self-explaining door models allow fast and easy hardware configuration through one-click selection of the door type, such as standard door, turnstile, elevator, and configure these with entrance or exit readers.
- Real-time activation of reader and cardholder configurations.
- Time zone support for AMC - allows installations across different time zones.
- Time schedules for time-based access permission defined per weekday including the definition of extra days, holidays, etc.
- Time schedules for automatic activation/deactivation of cardholder settings, such as access rules, pin codes and so on.
- Time schedules for automatic activation/deactivation of system settings, such as setting door status to permanent open from 9 a.m. to 5 p.m.
- Online swipe - verification via database image automatically provided through access request.
- Three PIN code types can be used for persons:
  - Verification PIN with alarm code feature
  - Identification PIN - substitutes a card
  - IDS-PIN to arm special areas
- Choose between the following access modes
  - Card only
  - Card with PIN (Verification PIN)
  - PIN or Card (Identification PIN)
- Temporary activation/blocking of cardholders, either manually or time controlled.
- Definable input fields for cardholder information.
- Anti-Passback
- Card personalization for importing cardholder images and creating your individual corporate badge designs printable on standard card printers.
- Up to three cards can be assigned to a person.
- Creation of an acknowledgment of receipt together with the print of the picture and the badge design.
- Creation of logical areas, which could be single rooms, groups of rooms, whole floors or parking lots, where access control points could be assigned to.
- Full archival and restoral of system data.
- Using the Bosch controller family AMC digital and monitored I/Os for additional control and monitoring functions or easy intrusion features.
- Supported languages:
  - English
  - French
  - German
  - Dutch
  - Japanese
  - Polish
  - Simplified Chinese
  - Russian
  - Spanish
  - Portuguese (Brazil)
- Detailed event log for recording access events.
- Integrated filter- and reporting features.
- Export into standard CSV-format for further processing.
- Comprehensive online help

### Alarm management

The Access PE alarm list shows all incoming alarms to the operator. Alarms can be accepted by the operator. In case of an alarm, the location map will be displayed. The icon of the device that triggered the alarm is highlighted by animation.
1. Map tree
2. Active location map
3. Device control from the map
4. Alarm list with event information (incl. video)
5. Device tree

Optional features
The optional features listed below can be added to meet specific customer requirements. They are usable with the Access PE base system, but require additional licenses.

Video

In the case of alarm events, video cameras provide live images to the operator, ensuring a proper response. Image streams can be recorded for later analysis or used as evidence. The recorded streams are linked in the logbook for fast and accurate retrieval.

Additional functionalities are:
• Alarm verification - providing live images caused through typical alarms around a door.
• Video playback from archives reporting on access requests or alarm situation with minimum search time.
• Live video can be selected from single camera or 2x2 matrix (quad mode).

<table>
<thead>
<tr>
<th>Pos.</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>7</td>
<td>Cameras</td>
</tr>
<tr>
<td>8</td>
<td>DVR or encoder</td>
</tr>
</tbody>
</table>

Additional to the positions in the first system overview the video components are included now.

Entrances from special interest can be equipped with additional video devices providing different options. The integrated video functionality in Access PE allows to assign up to five cameras to a door, each to be used as an ID or surveillance camera. With video verification the security level is raised by comparing the person's database image with a live stream while the environment can be observed for tail-gating or possible threats. Any violation, such as door open time exceeds, will provide alarm images for further investigation. Storage of those alarm images and retrieval of alarm archives using Bosch video storage systems are supported as well.
**Offline Locking System (OLS) (selected markets only)**

The OLS uses some components of the Online System. In the picture above the part with the grey background shows the devices which are used for both systems. On the left hand side there are devices of the Online-System and on the right devices of the OLS.

<table>
<thead>
<tr>
<th>Pos.</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Workstation</td>
</tr>
<tr>
<td>2</td>
<td>Server with configuration applications and the database</td>
</tr>
<tr>
<td>3</td>
<td>Access control reader with write module</td>
</tr>
<tr>
<td>4</td>
<td>Card - can be used for both systems</td>
</tr>
<tr>
<td>5</td>
<td>AMC2 4R4 - access controller</td>
</tr>
<tr>
<td>6</td>
<td>Access control reader</td>
</tr>
<tr>
<td>7</td>
<td>Dialog reader to read and write cards</td>
</tr>
<tr>
<td>8</td>
<td>OLS terminal</td>
</tr>
</tbody>
</table>

With the OLS it is possible to integrate a large quantity of rooms which are far away or not so security relevant in the access control system. All data are stored in the same database and the persons need only one card for both - the Online- and the Offline-System. Special reader with write-module (3), which are usually used for access control in the Online System, renew data and validity dates on the cards.

**Notice**

Writing OLS data onto cards can only be used with an AMC2 4R4. Systems with Wiegand-interface-controller (AMC 4W) have to be expanded with at least one AMC2 4R4 and the corresponded reader.

**Milestone XProtect integration**

The Access PE can be interfaced with the video management system XProtect from the company Milestone. Access control and video related features will be subject in the integration between products. Following integration features can be set up between both products:

- Entrance monitoring with simultaneous live view and instant playback
- Video verification via the XProtect dialogs incl. cardholder details
- Mapviewer with entrance control and device status
- Alarm management with integrated access alarm, maps and video verification
- History event log with correlated video footage and card holder details

Access control management will remain to be operated through Access PE in integrated set-up. Video management and security management will handled through via the XProtect system. In integrated set-up the mapviewer, video features and alarm list will be disabled in the Access PE.

The Milestone XProtect Plugin download is available in the Bosch Security Systems online product catalog.

**SDK for operational functions**

The Access Professional Edition SDK for operational functions is a reusable kit that can be used by developers to integrate access control functionalities into their applications. The SDK is based on the Access Professional Edition version 3.5 or later. SDK integration of access control on 3rd party applications enables the following functionalities:

1. Read all person and card data
2. Create, update and delete a person
3. **Assign and delete card for the specified person**
4. **Read all configured entrances**
5. **Assign authorization of an entrance to a person/groups**
6. **Read any entry and existing transaction of a person**
7. **Event trigger for entries and transactions**
8. **Read all entries and existing transactions filtered by time frame**
9. **Direct control of the access to doors**
10. **Read door and operation state of configured entries**
11. **Event trigger for door or operation state changes of entrances**

Ordering information

ASL-APE3P-BASE License for basic package
1 Client, 16 Readers, 2,000 Cards
Order number ASL-APE3P-BASE

ASL-APE3P-BEXT License for extended basic package
2 Clients, 64 Readers, 10,000 Cards
Order number ASL-APE3P-BEXT

ASL-APE3P-RDR License for reader expansion
16 additional readers.
Order number ASL-APE3P-RDR

ASL-APE3P-CLI License for user/client expansion
One additional client
Order number ASL-APE3P-CLI

ASL-APE3P-VIDB License for video basic package
Enables video with 16 channels
Order number ASL-APE3P-VIDB

ASL-APE3P-VIDE License for video expansion
16 additional channels.
Order number ASL-APE3P-VIDE

ASL-APE3P-OLSB License Pegasys offline basic package
Enables Offline Locking System (OLS) with 16 doors
Order number ASL-APE3P-OLSB

ASL-APE3P-OLSE License for Pegasys offline extension
One additional door for the Offline Locking System (OLS).
Order number ASL-APE3P-OLSE

ASL-APE3P-RDRL License for reader limit up to 512
Extends APE to a maximum number of 512 readers.
Order number ASL-APE3P-RDRL

ASL-APE3P-XPRO License for Milestone XProtect Plugin
Video management and security management handled through the Milestone XProtect system, with Entrance monitoring, Video verification, Mapviewer, and Alarm management.
Order number ASL-APE3P-XPRO

ASL-APE3P-API License for SDK for cardholder data
Software Development Kit (SDK) to connect APE, for example, to a Time & Attendance system: to import cardholder master records, and to export access control events. The SDK, with its command set, has its own documentation.
Order number ASL-APE3P-API
