B Series Control Panels to protect people and property
B:more:secure

B Series integrated security solution
Secure people and property. These flexible systems fit a range of facility configurations—from retail stores and banks to schools, office buildings and more.
**B:more:flexible**

Control individual rooms or up to six distinct areas of your facility. You can turn off your office while your retail area remains secure, protect your bank’s main building while the ATM vestibule remains off, or leave the school gym open while classrooms and labs are monitored.

Scheduled events also allow you to program the system to automatically turn on or off at predetermined times or to perform other functions based on an internal clock and calendar.

**B:more:innovative**

The control panels are modern Internet appliances for security applications. They support both current and future Internet Protocols—IPv4 and IPv6—to protect your investment as technology changes. Multiple interfaces for Ethernet and USB connections and simple plug-in communication modules allow for easy adoption of new technologies.

Remote programming with advanced diagnostic capabilities minimizes costs by allowing technicians to service your system or enable and disable certain functions without traveling to your facility. Remote firmware updates ensure easy maintenance and feature enhancements.
B:more:aware

Integrating Bosch IP cameras with the panel lets you see what is happening at your business from a remote desktop or smart phone. The camera’s built-in video motion detection can activate points on the panel, and panel events to trigger camera actions, including sending video clips via email. Verify the identity of the person who armed or disarmed your system or see video images of other events. You get more information about what is happening at your facility and about the safety and security of your employees.

B:more:at ease

Each control panel works around the clock checking for open windows and doors and performing other services to keep your facility secure. It provides safeguards against burglars, vandalism, and more.

And, with event notifications—such as alarms, or warnings from temperature or water level sensors—sent direct to your email or mobile phone, you are always kept up to date on the status of your facility even when you are not there.
Use your existing data network or cellular data network with your control panel to send reports to the central station receiver—eliminating the need for a phone line, reducing your costs, and increasing security.

With our Remote Security Control app, you can also operate your system from an iOS or Android device. Turn on or off the system, check status, and control monitored points or doors using a smart phone or tablet. You can even view live video or still images from Bosch IP cameras integrated with the panel.
B:more:intuitive

Program the control panels to carry out multiple functions with a single keypad command so you can customize the system to meet your specific needs. This makes it easy to turn the system All On, Part On, or Off for events such as overtime work, holidays, or after-hour meetings.

Bonjour! Hola! Olá! Hello!
Display system text in English, Spanish, French, or Portuguese and automatically switch languages based on the user’s preference. This makes it easy to accommodate multilingual applications.

B:more:in control

With the panel, you can control other building systems. Control lights and adjust air conditioning or heat based on building occupancy to conserve energy and reduce costs.

Bosch keypads guide you through system control functions with just a few easy steps. The simple user interface helps reduce errors and minimize false alarms. You can also turn the system on or off with a wireless keyfob—making access easy for employees.
B:more: comprehensive

The control panels offer a complete system that works with a range of available components, allowing you to customize a solution that fits the specific needs of your facility. The range of available components include:

**Keypads**
Choose from a color graphic touch screen display, a two-line LCD keypad, ATM-style LCD keypads, or a two-line capacitive touch keypad. With programmable text, you can customize the system to provide the most complete information for response to critical events.

**Intrusion Detectors**
A full line of intrusion detectors include the Commercial Series and Blue Line Gen2 with excellent catch performance and false alarm immunity.

**Wireless Transmitters**
RADION component options feature superior range, reliability, flexibility and battery life to provide maximum security with minimal inconvenience and cost.

B:more: reliable
Bosch employs the highest standards to ensure quality and performance. Each control panel has also passed rigorous testing by Underwriters Laboratory (UL/ULC), an independent product safety testing and certification organization.

B:more: confident
Invest in a B Series panel and get more for your organization.
A Tradition of Quality and Innovation
For 125 years, the Bosch name has stood for quality and reliability. Bosch is the global supplier of choice for innovative technology, backed by the highest standards for service and support.

Bosch Security Systems proudly offers a wide range of security, safety, communications and sound solutions that are relied upon every day in applications around the world, from government facilities and public venues to businesses, schools and homes.
